

mySAP Implementation for Textile Export Company

mySAP ERP 4.7 Enterprise Implementation

The Summary

The client's main requirement was to reimplement mySAP ERP application in the organization, which had failed due to lack of user involvement. AG Technologies reimplemented mySAP and took all the measures to involve user in the implementation which facilitated client a stable platform for their core business processes and harmonized operations across the business units of the organization

The Client

Client established its operations in 1985 and is one of the growing 100% export house. Over the year it has grown, not only in profits but also historically, in terms of its buyer base, quality standards and customer satisfaction.

The Business Requirement

Client had implemented mySAP 4.7 from one of the vendors. However the system failed due to lack of user involvement during the implementation of the system. The system was unable to map the current business process of the company. Also the vendor was unsuccessful in involving the company's core team, Business Process owners and key owners. The primary requirement of the client was to reimplement mySAP ERP 4.7 and one of the critical project requirements was to take adequate measures to involve user in the SAP implementation. Client approached AG Technologies, which has executed many SAP projects successfully.

The Solution

To meet the above requirements, firstly AG Technologies reimplemented all the existing modules like Finance, Materials Management, Sales & Distribution, and Production Planning. Also client got an opportunity to add one additional controlling Module. The new controlling module provided client with the following distinctive features:

- The Profitability Analysis solution was unique due to interface with Project Systems module.
- The Product Costing solution was unique due to the nature of business wherein the Parent company was getting the manufacturing activities carried out at subcontracting company belonging to the same Group of company

Project Summary

Industry: Textile

Client Profile: Leading 100% Textile export house

Business Requirement:

To reimplement mySAP involving the users of the organization

Solution:

Reimplemented standard SAP Enterprise resource planning (ERP) software to improve efficiencies throughout organization

Solution Benefits

- Improved operational efficiency
- Provided platform for growth
- Integrated operational units
- Enabled accurate reporting

AG Technologies

Secondly to involve users in the implementation, AG Technologies had taken ample measures to get active involvement of the user. Following were the measures:

- Kick off presentation was followed by demonstration of SAP Tutor software explaining its utility.
- Loaded SAP Tutor software on PCs used by all BPOs, Core Team members as well as End users.
- Made available the SAP Tutor files for all the Transaction codes listed in BPML for all the modules.
- Getting the Business Blueprints modified as and when the suggestions were put forward by Core Team members and BPOs.
- Demonstrated the End to End scenarios to the Core Team members and BPOs to give them crystal clear idea about how the Business functionality is mapped.
- Got the Core team members by the side of Functional consultants to witness the Unit Testing and Integration Testing so that they can do User Acceptance Testing confidently.

With the above execution, client was satisfied with AG Technologies reimplementation and other initiatives. Using SAP software, client's organization now runs smoothly and efficiently. By implementing SAP software, client knows that they have a solid platform in place, with built-in functionalities that could easily be activated in the future.

Technology Deployment

- **SAP Solution:** mySAP ERP 4.7
- **Hardware:** 2xIntel Xeon 3.2
- **Operating System:** Windows 2000
- **Database:** MSSQL 8.0
- **No of SAP User Licenses:** 15 Users

The Solution Benefit

- Benefit from regular support package updates, especially those in legal, tax, human resources, payroll areas.
- The new implementation gave a greater ability to meet new requirements as the company was emerging.
- Provided Stable platform for their core business processes that complemented operations across the business unit of the organization

AG Technologies

- Improved efficiency and productivity of the operations because of the integrated solution
- Client reporting is now more accurate which improved and fastened the decision making
