

Company Rollout for a Tubular Chassis Manufacturing Company

SAP Rollout in South Africa

The Summary

Client has approached AG Technologies for conducting SAP Rollout for its subsidiary in South Africa. AG Technologies executed the Rollout with one legal entity. AG Technologies completed rollout project within 10 weeks which also includes 1 week of Post Production Support.

The Client

Client has a captive tube manufacturing unit for tubes which are used in manufacturing tubular chassis. Client is also the trendsetter in the use of advanced robotics in the assembly and welding of chassis, as well as being the first chassis manufacturer in India to set and attain the QS 9000 process certification for its assembly and manufacture of tubular chassis.

The Business Requirement

Client approached AG Technologies for SAP Rollout at its subsidiary in South Africa with one legal entity.

The Solution

AG Technologies approach for SAP Rollout was as follows -

- AG Technologies referred existing Business Blueprint (BBP) document for SAP Configuration, to validate the existing configuration jointly with Business process owners at India and South Africa.
- These configurations then will be extended to client's subsidiary in South Africa for configuring their SAP system.

Project Summary

Industry: Manufacturing

Client Profile:

The first chassis manufacturer in India to set and attain the QS 9000 process certification for its assembly and manufacture of tubular chassis.

Solution:

SAP Rollout for subsidiary in South Africa.

Solution Benefit:

- Standardization of business processes
- Governance of corporate policies
- Improved productivity & efficiency.

- Additionally Gaps identified during this activity are also addressed by AG Technologies.
- During BBP phase list of reports to be developed and desired outputs are finalized.
- AG Technologies provided Functional Specification document for 5 customized reports.
- Interfacing with any third party software or tool is not considered.
- Existing data required for the system is migrated using the Batch Data Conversion (BDC) functionality of the SAP or LSMW (Legacy System Migration Workbench) tool in SAP.
- AG Technologies provided the training, to familiarize the key users with each functional modules being implemented and configurations made specific to client's requirement within each module. The training covers the following:
 - SAP overview and Key concepts
 - Details of the SAP modules implemented
 - Master Data
 - Key business transactions
 - Integration with other modules

SAP Modules and Version:
